EXPERIENCE

Founder, Evidane — 2026 – Present · Concurrent with Brekfuz · evidane.com

Evidence-backed legal AI: 87 agents, ten verification passes, human sign-off.

- Took Evidane to 1,000+ signups, paying customers and five US law firms by Sep 2026.
- Merged two legal-AI codebases into one product and shipped v1.0.
- Launched after 1,000+ commits in 15 weeks: auth, Stripe credits and billing, Postgres, hosting.

Founding Engineer, Brekfuz — Full-time · Remote · Feb 2026 – Present (8 mo) · brekfuz.com

Company-knowledge AI agents. Backed by Pareto Holdings, Pear VC, Z Fellows, Cory Levy, Collective Global.

- Built the platform end to end: four TypeScript and Go services on AWS, 213,761 requests in 14 days.
- Scaled memory agents to 100,000+ requests behind PostgreSQL row-level security on 103 tables.
- Architected Breken, from code intelligence to renderer to sandbox: 54 fixes merged upstream in 34 repositories, including Langflow, Tailscale and Unsloth.

Founding AI Engineer, Hey Amara — Full-time · Remote · Jul 2025 – Jul 2026 (13 mo) · Concurrent with Brekfuz

Founding engineering hire. Multi-tenant agent platform for recruitment agencies.

- Moved agent work off Redis onto RabbitMQ, so one slow agent no longer blocks a caller.
- Compacted long threads into a validated schema rather than prose, so task state survives.

Applied AI Engineer, UltraSafe AI — Internship · Remote · Mar 2025 – Jul 2025 (5 mo)

- Reconciled six extraction engines by vote over clinical PDFs, then fused dense, SPLADE sparse and ColBERT scoring into a four-stage retrieval path on Kubernetes with OpenTelemetry tracing.

Founding AI Engineer, Munshot — Internship · Remote · Jan 2025 – Mar 2025 (3 mo)

- Shipped a fifteen-node LangGraph engine in Python over an MCP tool server fronting 10+ tools.

AI Engineer, RealAIzation — Internship · Remote · Oct 2024 – Dec 2024 (3 mo)

- Attached a written, disputable rationale to every candidate assessment in the scoring engine.

OPEN SOURCE

- github.com/Helmryth/HelmRyth — local AI operators; consequential actions wait for approval.
- github.com/RunPhantom/Run-Phantom — local debugger for AI-agent runs and CI regression checks.
- [tracel-ai/burn#5592](https://github.com/tracel-ai/burn/pull/5592) — fixed average pooling that divided by padded zeros at tensor edges.

1,600+ merged PRs career-wide; 350+ PRs to 50+ projects, including Hugging Face and Superset.

EDUCATION

B.Tech., Computer Science and Engineering — The LNM Institute of Information Technology, Jaipur, India · 2022 – 2026

SKILLS

Infrastructure: AWS, Redis, RabbitMQ, PostgreSQL row-level security, Kubernetes, OpenTelemetry

AI systems: Python, LangGraph, MCP tool server, dense, SPLADE sparse and ColBERT scoring
